Car Carrier *Prime Ace*

On March 18, the pure car and truck carrier (PCTC) *Prime Ace* was delivered at Minaminippon Shipbuilding Co., Ltd., and left for its maiden voyage to Europe.

The *Prime Ace*, with a capacity of 6,400 units (standard passenger cars), can accommodate tall vehicles on every deck. It is among the world's fastest, most advanced car carriers, with the most sophisticated safety systems currently available. Environment-friendly features include a ballast water treatment system and a pneumatic stern lamp locking system instead of hydraulic system. It also has the wind resistance-reducing design, double-hull fuel tanks, and innovative low-friction bottom paint that are now standard equipment on car carriers.
